BENTLEY'S

RUUDOLF MOSSE

Dear Dr. Vogt,

Thank you for your letter of Oct 3rd. I am very pleased that you intend to try the Hfr strain. Lederberg has both the original strain, which is a derivative of 58-161 (B-M-) after selection ^{for} ~~in~~ nitrogen mustard resistance, and some derivatives of it, which he has made himself for selection of recombinants by means of fermentative markers in complete media. May I suggest that you test single colony isolates for Hfr behaviour, since it tends to revert, especially if the strain is kept at room temperature.

Please give my wishes to Dr. Delbruck.

Yours sincerely

Wig. Cavalli
